

RBR Generation 3 Instruments

Eduardo Vaz, PhD
Senior Business Development Manager

About RBR

- Established in 1973 and Headquartered in Canada
- Offices: Ottawa, Halifax, USA, China, Australia, and France
- 80+ dedicated staff members
- Global sales and support network
- Focused on developing high precision, low-power oceanographic instruments
- Calibrated to WOCE standards
- RBR instruments have been deployed on all continents and oceans

RBR

RBRcoda³ Sensors

- RBRcoda³ T Temperature
 - RBRcoda³ D Depth
 - RBRcoda³ T.D Temperature & Depth
 - RBRcoda³ PAR PAR
 - RBRcoda³ T.ODO Temp & Optical Dissolved Oxygen
- No power, no logging
 - Requires 6 – 18 VDC
 - RS-232 communication
 - Polled or autonomous streaming

RBRcoda³ T

Range -5°C to +35°C

Initial Accuracy: $\pm 0.002^{\circ}\text{C}$

Resolution: $< 0.00005^{\circ}\text{C}$

Time Constant: $\sim 1\text{s}$ (standard) / $\sim 0.1\text{s}$ (optional)

Sampling Available: 2Hz, 8Hz, 16Hz, 32Hz

RBR

RBRcoda³ D

Range: 0 to 20 / 50 / 100 / 200 / 500 / 1000 dbar

Initial Accuracy: $\pm 0.05\%$ full scale

Time Constant: $< 0.001\%$ full scale

Sampling Available: 2Hz, 8Hz, 16Hz, 32Hz, tide16, wave16

RBR

RBRcoda³ T.D

Range -5°C to +35°C

Initial Accuracy: $\pm 0.002^\circ\text{C}$

Resolution: $< 0.00005^\circ\text{C}$

Time Constant: $\sim 1\text{s}$ (standard) / $\sim 0.1\text{s}$ (optional)

Range: 0 to 20 / 50 / 100 / 200 / 500 / 1000 dbar

Initial Accuracy: $\pm 0.05\%$ full scale

Resolution: $< 0.001\%$ full scale

Sampling Available: 2Hz, 8Hz, 16Hz, 32Hz, tide16, wave16

RBR

RBRcoda³ T.ODO

- Range: 0-500uM (saturation 0-120%)
- Initial Accuracy: Max. of $\pm 8\mu\text{M}$ or $\pm 5\%$
- Resolution: $< 1\mu\text{M}$ (saturation 0.4%)
- Sampling Available: 24hr to 1Hz
- Max. Depth: 6000m

- |fast 1s (profiling)
- Standard 8s
- |slow 30s (moored)
(Wiper available for |slow)

RBR

RBRcoda³ PAR (Photosynthetically Active Radiation)

- Range: 400nm to 700nm (i.e. visible)
- Accuracy: $\pm 2\%$
- Wavelength: 400-700nm
- Sampling Rate: up to 16Hz
- Maximum Depth: 560m

RBR

Compact Loggers

1x AA battery

1 or 2 channels

USB-C download

Compact Loggers

Single Channel (RBRsolo³)

- Temperature
- Depth
- DO
- Turbidity
- PAR

Dual Channel (RBRduet³)

- Temp. & Depth
- Temp. & ODO

Standard Version $\leq 1,700\text{m}^*$

Titanium Version $\leq 10,000\text{m}^*$

RBR

Standard Loggers

- 8x AA battery
- 1-10 channels
- USB-C download
- Twist activation
- Wi-Fi ready
- Ruskin Mobile App
- Optional ext. comms

Standard Loggers

- **RBRvirtuoso³** – Most any 1 sensor
- **RBRduo³** – Most any 2 sensor
- **RBRbrevio³** – 3 sensors (CTD only)
- **RBRconcerto³** – 3 to 5 sensors (CTD++)
- **RBRmaestro³** – 6 to 10 sensors
- Conductivity, Temp., Depth, T.ODO, DO, FI, PAR, ORP, pH, Turbidity, Transmissometer, Altitude, Tilt, CO₂, CH₄, Voltage, and more.

RBR

RBR *quartz*³ Series

Initial Acc. : +/- 0.01% full scale

Resolution : 10ppb (@ 1Hz)

Low drift – high stability

Up to 7000m depth

RBRquartz³ Series

- RBRquartz³ Q & Q|plus
 - $\leq 330\text{m}$
 - Wave, Tide, Sea-level
- RBRquartz³ BPR
 - $\leq 7000\text{m}$
 - Autonomous BPR
- RBRquartz³ BPR|zero
 - $\leq 7000\text{m}$
 - AzeroA Correction Recorder
- RBRquartz³ APT
 - BPR
 - Triaxial Quartz Accelerometer

RBR

OEM

Low power electronics
Sensor hub
Integrated solutions

Teledyne
APEX

MRV
ALAMO

NKE
ARVOR

MetOcean
PABLO

MRV
S2-A

NOTC
COPEX

RBRargo³

- Integrated into many Argo and non-Argo vertically profiling floats
- Low power electronics extends missions and reduces cost/profile
- Low drift sensor improve data quality over long deployments

RBR

Seaglider – L. Rainville and G. Shilling (APL-UW)

Slocum - NOAA GLERL – Great Lakes Observing System

Seaexplorer

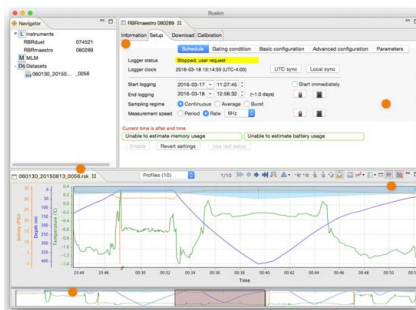

RBR/legato³ C.T.D

- Seamlessly integrated CTD to ocean gliders and AUVs
- Low power electronics extends missions and increases sample density
- No pump means quiet operation for passive acoustic listening and turbulence studies
- Functions as 'sensor hub' to efficiently integrate other sensors

RBR

Systems

Systems

- Integrated platforms
 - Sofar Smart Mooring
 - DMO Wirewalker
- Software
 - Ruskin Mobile (iOS / Android)
 - Ruskin (PC / macOS)
- External Power and Brains
 - RBRfermata
 - RBRcervata
- Inductive modems
 - MLM-1000
- Telemetry and hosting
 - RBRcervello

RBR

Thank you!

Over to you, Sofar! ...

RBR

An underwater photograph showing a diver in a black wetsuit and red fins swimming towards the right. In the center, a vertical buoy or sensor is suspended in the water, featuring a green, umbrella-like top and a black cylindrical body. A thin green line extends from the bottom of the buoy towards the diver. The water is clear and blue-green, with sunlight filtering through from the surface.

Accessible Ocean Observations

An underwater photograph showing a diver in a black wetsuit and red fins swimming to the right. In the center, a vertical buoy with a green top and a black bottom is suspended. The water is clear and blue-green, with sunlight filtering through from the surface.

We connect the world's oceans to provide insights to science, society and industry for a more sustainable planet.

Agile Metocean Buoy

BRIDGE TO
STERN
176 FEET
54.3 METERS

Accessible Ocean Observations

Spotter is a scientific-grade meteocean buoy powered by the sun and connected through satellite. Every Spotter measures and calculates:

- Surface wave spectrum (swell, sea, period, direction)
- Wind speed and direction
- Surface current and direction
- Sea surface temperature
- Barometric pressure (next gen)
- Acoustic intensity (next gen)

Spotter + Smart Mooring

- **Easy deployment** - a single package that can be deployed from any size vessel. After deployment, data will start flowing to your Dashboard and API
- **Sensor Modularity** - provides unprecedented flexibility and modularity. The system is designed to integrate with most sensors. You pick the sensor and at what depth you want it
- **Durable and Tough** - the polyurethane cable with Kevlar braid is designed to withstand the harshest marine environments

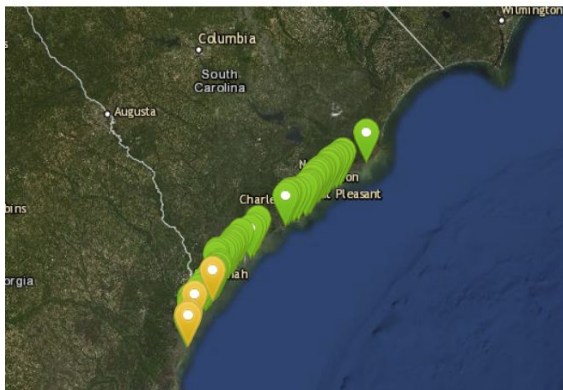

Smart Mooring + RBRcoda³

USGS - Coastal Resilience

Building regional networks of real-time storm surge, coastal erosion, and flood prediction models

Storms and sea-level rise pose huge challenges for coastal communities.

Each beach and harbor has different physical characteristics that make **modelling and predictions difficult.**

USGS is deploying networks of **hyper-local** pressure sensors to measure water levels and surge.

A map-based digital tool will aggregate data predict effects of **storms and coastal erosion.**

USGS will be able to develop **better predictive models** and provide **real-time information** for planners and emergency management agencies to make better decisions.

Aqualink - Global Reef Observation System

A non-profit organization working on building ocean conservation technology to track and mitigate the impact of rising ocean temperatures

Currently **coral reefs are undergoing heat related stress events** and die-offs.

Satellite data is also used but only shows the top layer of water.

Due to the difficulty of deployment & data recovery efforts, **measurements are mostly sparse & intermittent.**

Smart mooring allows the deployment of **real time sensors.**

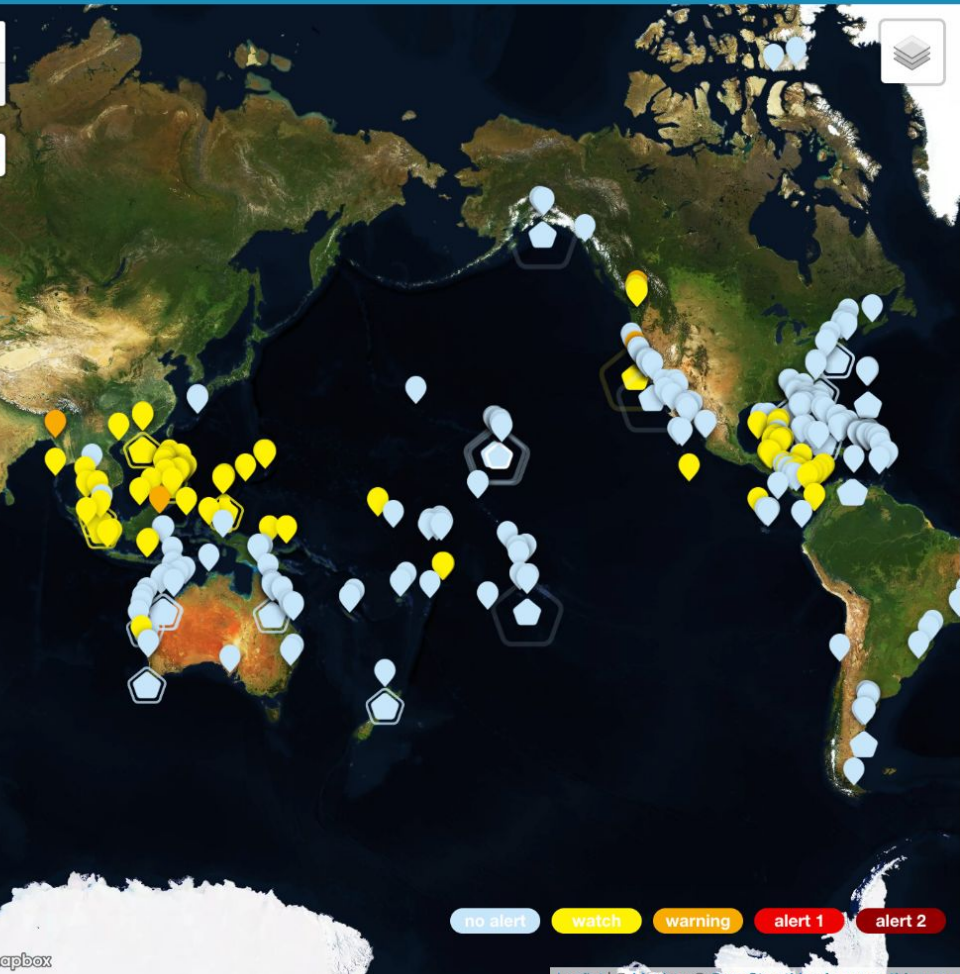

At scale this will allow for a greater understanding of **heating and weather related events** and their effects on coral reefs.

Future integrations Smart Mooring system will including **water quality sensors** and **live photos or videos** from the reef.

Aqualink is building a database & analyzing this data, which can have a significant **impact on reef preservation and restoration.**
